Today's managers need accurate work analysis information

The system automatically checks for errors in times and tasks. Clear error messages assist users.

Completed timesheets along with activity information are forwarded to managers for approval.

TADPOLE provides up to date activity reports and forecast information

Reports are produced on tasks and activities, employee, customer and costing information with drill down functionality so that you know what is really happening.

Yearly forecast information is also available.

TADPOLE reporting is an automatic process. Any information changes in the system are automatically reflected in the reporting database.

TADPOLE is easily tailored to meet your needs

The update facility for tasks, programs, customers and user profiles ensures there are no hidden overheads.

Service and support when you need it

TADPOLE comes packaged with installation and setup support. Minimal training is required.

Online HELP is provided to users.

There are 4 versions of TADPOLE available, so it will run on almost any platform including Lotus Notes.

A browser based web version is available.
